

Sprint changed the Verizon Prefix, 717 515-XXXX to local long distance. As a result my local Sprint phone bill is up \$30+ per month. My customers are now paying a toll charge to call me from Hanover, PA to Hanover, PA. I can't use "portability" because the number will still be local long distance. This stinks and is an excuse to extract more money from the consumer. If it was local at it's inception, then it should remain local. By-the-way, Verizon says it is Sprint that changed the rules and Sprint says that it was Verizon who decided to stop paying for the calls.

Thank you,
